SUMMARY

Senior Software Engineer with 5+ years building high-throughput B2B SaaS infrastructure and production GenAI systems in Node.js, TypeScript and Java. Owned email infrastructure delivering 4M+ emails a day and search across 400M+ documents at 100-200ms latency, while leading and mentoring a team of 8 engineers. Recent work spans LangGraph-based AI agents, RAG and semantic search in production. Open to relocation within India and Europe.

EXPERIENCE

Senior Software Engineer - Backend

Saleshandy

Sep 2022 - Sep 2026

Ahmedabad, India

- **Two-time “Above and Beyond” Award winner** - Owned and evolved the distributed backend infrastructure behind Saleshandy's outreach product, delivering 4M+ emails and processing 2M+ mailbox interactions daily with high availability.
- Cut production support incidents by ~90% by introducing fallback mechanisms, idempotent execution, observability dashboards and proactive Grafana alerting; led root-cause investigations for production issues.
- Engineered OpenSearch infrastructure across 400M+ and 80M+ document indexes at 100-200ms latency for the Lead Finder product; benchmarked semantic search across embedding models and wrote Painless transformation scripts for an S3-backed Kubernetes pipeline ingesting ~1.2 TB of data.
- Built a stateful conversational AI agent using LangGraph orchestration, session memory and FAISS retrieval, cutting lead-filtering time by ~20x.
- Contributed backend work to Saleshandy's CRM and Unified Inbox, supporting multi-channel customer workflows across Email, WhatsApp, Calls, LinkedIn and Tasks.
- Led and mentored a team of 8 engineers through design discussions and code reviews; built AI-assisted hiring workflows that saved 5-6 hours of manual recruitment effort per week; worked closely with founders, product and support.

Software Developer - Full Stack

Accenture

Jan 2021 - Sep 2022

Pune, India

- Engineered RESTful APIs with Spring Boot and PL/SQL to aggregate telecom data reliably.
- Automated data migration and validation workflows in Python, saving 5+ hours a week of engineering effort.
- Built real-time network monitoring dashboards in ReactJS to visualize critical telecom usage metrics.

PROJECTS

Ask Mahima - Production RAG Assistant

Python, FastAPI, ChromaDB, all-MiniLM-L6-v2, ONNX Runtime

[Website](#) | [Github](#)

- Built and deployed a production RAG system that answers questions about my work and experience, using ChromaDB retrieval over all-MiniLM-L6-v2 embeddings served through ONNX Runtime.

BrandVeda - AI Brand Visibility Intelligence Platform

NestJS, TypeScript, MongoDB, OpenAI, Gemini, Perplexity

[Github](#)

- Designed data pipelines running 54 parallel LLM evaluations across multiple models to quantify a brand's share-of-voice in AI answers.

KEY SKILLS

Languages & Frameworks: TypeScript (primary), JavaScript, Node.js, NestJS, Express, Java, Spring Boot, Python, ReactJS

AI & Agents: LangGraph, LangChain, MCP, RAG, Semantic Search, Tool Calling, Structured Outputs, LLM Evaluations

Data & Messaging: MongoDB, MySQL, Redis, BullMQ, Kafka, OpenSearch / Elasticsearch, ClickHouse

Cloud & Tooling: AWS, Docker, CI/CD, Grafana, System Design, Microservices, Jest, JMeter

EDUCATION

Jaipur Engineering College and Research Centre (JECRC)

Bachelor of Technology in Computer Science Engineering

Jaipur, Rajasthan

2016 - 2020

Certification: HackerRank Certified Software Engineer (Python)

Languages: English (professional), Hindi (native)
